### **Global Design Solutions introduce LiteWare Solar, the first carbon efficient event lighting system.**

Global Design Solutions (GDS) have announced the launch of LiteWare Solar, a portable solar charging system for the LiteWare range.

LiteWare is a stand-alone controllable light source with charging flightcase units, which GDS successfully launched in February 2009. Designed predominantly for the events and entertainment industries it has made a significant impact in the marketplace, with over 90% of large professional event companies holding inventory.

The latest addition to the range is LiteWare Solar, a portable solar charging system. LiteWare Solar is easily deployable and transports in its own flight case, it allows LiteWare to be charged in all weathers and does not rely on mains electricity for operation. It works directly with the existing LiteWare range and provides charging power supply via a new connection plate on the LiteWare FC6 and FC10 charging flightcases, which allows the connection of any sustainable source delivering DC voltage. GDS will be showing the LiteWare Solar as a sustainable option, however users could use a wind turbine for example, as the case will automatically detect the voltage supplied and regulate the current available to charge LiteWare.

Matthew Lloyd, Managing Director at GDS commented:

“LiteWare Solar represents a brand new way of thinking for event lighting industry, from an environmental and practical perspective, making LiteWare the first carbon efficient event lighting system”.

You can visit GDS at PLASA09 on Stand 2-S18, Hall 2 from the 13<sup>th</sup> to 16<sup>th</sup> September, for more information visit [www.gds.uk.com](http://www.gds.uk.com) or email [salesuk@gds.uk.com](mailto:salesuk@gds.uk.com) or [salesus@gds.uk.com](mailto:salesus@gds.uk.com) .

GDS is a multi-award winning UK Manufacturer with a diverse range of technology based products. Based in Bristol with offices in the US, it has six innovative brands in its product portfolio specialising in lighting and control solutions.
